for Infants and Children. What is Castoria?

CASTORIA is a harmless substitute for Castor Oil. Paregoric, Drops and Southing Syrups. It is pleasant. It contains neither Opium, Morphine nor other Narcotic substance (Narcotics stupely). Its age is its guarantee. It destroys Worms and allays Feverishness. It cures Diarrhea and Wind Colic. It relieves Teething Troubles, cures Constipation and Flatulency. It assimilates the Food, regulates due to an agent which passes through a poreclain filter. The study of malignant growths of lower animals seems cleep. The Children's Panacea—The mother's to offer the only hope of learning any Friend.

before the appearance of the rash.

"A new filterable virus, pathogenic for rats was reported by Prof. Novy of the University of Michigan. This expert described a new germ so small as to pass through the pores of the most inpermeable of porcelain filters and so abundant in the infected animal that one-one billionth part of a drop of blood was enough to produce the disease. It is infections for rats only, not affecting any other animals; even mice are immune. It is not known how the disease is transmitted in sature and the discoverer does not regard it as of value for rodent extermination.

The Payton Phase of the Rockefel
problem to which much attention was paid.

Effect of Canal Opening.

He tells of a paper read by Assistant Surgeon-General Leland E. Cofer, who is well known in Hawaii, on "The Advance in Quarantine Incident to the Opening of the Panama Canal."

Dr. Cofer proposes to have all ships' surgeons especially trained in scientific quarantine and to have them act as anitary authorities on vessels. He suggests the formation of an "International Sanitary Union" to be composed of the great nations that will use the canal. These would be expected to keep their ports in such condition that the danger of exporting disease would be minimized.

"Dr. Peyton Rouss of the Rockefel- disease would be minimized." ler Institute, New York, described a cancer (sarcoma) of chickens that is

race.

"Prof. Adolph Dieudonne of Munich,
Germany and Dr. Charles Krumweide,
Jr., of New York described methods of
isolating the cholera spirilum, the former using alkaline blood agar, the latter employing an erg agar, and the numan in the formula in the fo ter employing an egg agar medium, Both methods have certain advantages

agent."
Study Of The Hockworm.

"The subject of Hockworm infection came in for a very exhaustive discusion. The mode of Infection was demonstrated. It was shown that the embryonic worms pats through the skin of the feet, less often than that of the hands, and thus gain access to the body fluids that finally deposit them in the intestinal tract where eggs are formed and these pass out and again ready to become embryos and infect the next individual with when they come in contact. The point to be especially emphasized in that the prevention of the disease lies in such a manner that it may not "This territory's contribution to the

"The spread of plague came in for considerable discussion but nothing new was brought out, though emphasis was properly laid on the fact that the essential point in combating this disease was the warfare ou redents.

this disease was the warfare of redents.

Cholera Spread Taken Up.

"The spread of cholera was considered and the conclusion reaches that practically always the disease is conveyed by persons, either convales cepts, those actually sick or by those who have entirely recovered but continue to disburge the garm from intestinal tract. So far as preventative measures go, one must depend upon bacteriological examination of the stools of persons from cholera infected places and of those who have been in contact with cases of cholera. It is preferable to enforce this examination at the port of embarkation in the case of oversea traine, but where this is not practicable it must be rightly carried out at the destination.

"Typhold lever, which is generally known is the most widespread of the acute infectious diseases, was considered. It was brought out that in recent years much had been done to suppreus this disease in large cities, but there had been little diminution in the unal communities. The point especially emphasized was that as simile a measure as the introduction of moner privies or cesspools is often pough to practically eliminate tycked fever from a community.

"A number of reports ware as the introduction of the pough to practically eliminate tycked fever from a community."

phoid fever from a community.

"A number of reports were made upon the use of killed culture vaccine in the prevention of typhoid fever. This measure has been in use a surprisingly large number of instances and with apparently uniform good results. It appears clear that this preventive moculation will ordinarily obviate an attack and if it fails in this appropriate the attack very large render the attack very large render the attack very large to provide the children their little instances. at any rate render the attack very

"The point was emphasized that in every case of typhoid fever, diphthe-ria, epidemic meningitis, choiera and dysentery, it is most important that the patient be not discharged until such time as he is shown to be free

from the germs of the disease.

"Just what to do with those who while clinically fully reovered, at a while clinically fully reovered, at harbor the germs is a very difficult problem that has given special concern in relation to typhoid fever. The very minimum requirement should be that they be prohibited from any occupation that would bring them in contact with food."

that other communities less fortunate than this one are encountering serious difficulties in suppressing the ris-

Dr. Pratt goes on to summarize other important problems of health and sanitation taken up. He says that in the discussion of venereal disease so fat as concerns armies and naives it seemed clear that the situation is best met by frankly recognizing that the pien will expose themselves and measures should be provided to reduce the likelihood of infection. Tuberculosis was discussed at some length and by many eminent authorities.

Dr. Pratt reports fully on the work for consistion and guarantine done at

for sanitation and quarantine done at the great congress. The pollution of

waterways and sources of water sup-ply was taken up and the fact em-phasised that every safeguard must be taken to preserve the purity of drinking water and even of bathing water. Sewage disposal was another problem to which much attention was

Dr. Pratt says:
"Boeks and wharves must be made rat-proof and so far as it is practicable the rat-proofing should be extended to the whole of that part of the port that has to do with shipping.
"The vicinity of the docks must be

cican, pure and fresh than it is to keep the sewers and drainage of a large city free from obstruction.

Are you keeping clean inside with Cascarets—or merely forcing a passageway every few days with saits eathartic pills or castor oil? This is important.

important.

Cancarets immediately cleanse and regulate the stomach, remove the sour, undigested and fermenting food and foul gases; take the excess bile from the liver and carry out of the system the constiputed waste matter and poison in the intestines and bowels.

CARTHY FINDS

OFFICE QUARTERS
C. J. McCarthy, city and county
treasurer elect, has taken the first
store next the stairway in the Kapiolani building for his official quarters. It is on Alakea street, just around the corner from King street. The front of the store has been partitioned off for the treasurer's private office, and the larger portion beyond will be fitted up for the clerk and license collector. There is ample space for the laborers in front of the that they be prohibited from any occupation that would bring them in
contact with food."

Control Of Rabica.

"The control of rabies is a subject
that has only a theoretical interest
for us in Hawaii as the disease does
not exist here and we have every reason for believing that the rigid enforcement of the order prohibiting the
insportation of dogs except under certain restrictions will serve to keep it
cut. It is worth mentioning however
that other communities less fortunate
